## The SIMMS Barcode Module...a simple seamless solution...

Barcode printing is one of the most important aspects of inventory control and our professionals can assist in the decision-making process. From thermal and dot matrix barcode printers to sophisticated 2D barcode scanners and 2D data collectors, we offer expert guidance so you can make an educated decision and understand what options are available.

### Smart Solution

When it comes to producing barcodes, the SIMMS Barcode and SIMMS 2D Barcode Modules are the smart solution-increasing efficiency while lowering costs. We also offer complete hardware packages and customized solutions. We understand every industry has unique demands and SIMMS offers the most sophisticated barcode and label-making module in the industry. Whether it is barcode labels to be printed for one specific serialized item or for entire categories, SIMMS is compatible with laser printers, specialized dot matrix printers and thermal barcode printers.

### FEATURES

- Print serialized barcodes from our easy-to-use barcode interface, including items' manufacturer lot numbers
- Easily print apparel item barcodes for every item on a receipt of goods on-the-fly and apparel item tags
- Print barcodes for all items from a receipt of goods
- Print barcodes for an entire category of items
- Several barcode formats are supported, and labels can be exported to an external Crystal Report for easy adjustments and/or layout changes. 2D barcoding is supported, providing the ability to select what information should be included in the 2D barcode, e.g. item number, item description, UPC, quantity and manufacturer's lot. The 2D barcode escape code parameters can be set using the Advanced Barcode Printer Setup.
- Print location barcode labels, either one location at a time or adding all locations in your system. Location labels enable the scanning of location codes during transactions. A hand-held data collector can make inventory management much easier by eliminating the possibility of user error.
